OFFSHORE 22

Loadout of the complete 25,500 tonnes weight semi-submersible over a distance of 120 metres, using eight Fagioli PSC L600 strand jacks. Several months earlier Fagioli PSC completed the lift of the 11,000 tonnes weight deck module to a distance of 38 metres using 24 No. Fagioli PSC L600 strand jacks. This allowed the two lower hull sections to be skidded underneath using a Fagioli PSC Active Loadout System, enabling very controlled mating of the deck module and the lower hull sections.
